GIS Health Check

Abley's independent GIS Health Check ensures you are getting a return on investment from your ArcGIS Enterprise implementation. The Health Check gives a clear picture of your system's present functionality. It helps you plan for the future, focusing on performance, stability and capacity.

As part of this Health Check, our team can review:

Essential Health Check:

Security
- ☑ system authentication, and review of authorisation against business roles for consistency
- ☑ data security and access permissions against business requirements
- ☑ application compliance with security protocols, SSL, TLS and HTTPS

Strategy
- ☑ your software architecture and maintenance against Esri best practice
- ☑ your enterprise implementation against anticipated changes in technology
- ☑ that your enterprise implementation is aligned with your desired business outcomes

Performance
- ☑ focused analysis on the performance and optimisation of your enterprise systems
- ☑ desktop, server and database performance

Additional Options:

Integration
- ☑ your system integration between enterprise systems
- ☑ web services including REST API and integration platforms

Database
- ☑ information aggregation and warehousing
- ☑ database maintenance processes, data CRUD activities

Business
- ☑ optimisation of Esri license arrangements and utilisation

We will provide you with a report summarising:

- ✔ the overall state of your enterprise system and its constituent components
- ✔ benchmarking metrics of performance
- ✔ any urgent changes required to achieve key system stability and security outcomes
- ✔ short, medium and long-term recommendations for system improvement in line with business objectives and technological change
- ✔ opportunities to better leverage spatial technologies to support your business objectives
